

Elkay Plastics Vacuum Pouches

Vacuum Pouches provide an excellent means of keeping foods fresh and protecting against freezer burn. Foods such as cheese, meat, fish, nuts, dried fruit, jerky and snack products retain their freshness much longer thanks to the excellent sealing properties and oxygen transfer rates of Elkay vacuum pouches. In addition, vacuum sealing can provide outstanding protection to non-food products. Vacuum packaging can be used to reduce static electricity for electronics packaging, maintain sterility in medical packaging, and protect products from corrosion.

Elkay Plastics has two types of vacuum pouches available: Tough Laminated Poly-Nylon and economical Co-Extruded Vacuum Pouches, and both are available in a wide range of popular sizes. Whichever you choose, you can be sure that they:

- Meet FDA requirements for use in food applications
- Give extended shelf life to fresh and processed food products
- Work in both snorkel and chamber vacuum packers
- Poly-Nylon pouches are freezable and boilable
- Provides outstanding protection against freezer burn
- Are excellent for use in sous-vide cooking

CO-EXTRUDED VACUUM POUCHES

Elkay Plastics' Co-Extruded Vacuum Pouches are made from a cost-effective film that meets FDA requirements for use with food products. The three-mil thick, seven-layer mixture of polyethylene and nylon resins provides excellent performance, and its ability to stretch allows the material to conform to unique product shapes. Co-Extruded Vacuum pouches have high impact resistance and a low oxygen transfer rate that makes the material popular with food processors packaging meat, fish, nuts, dried fruit, jerky, and snack products.

LAMINATED POLY-NYLON VACUUM POUCHES

Laminated Poly-Nylon Vacuum Pouches provide the highest levels of clarity, strength and durability. They're made with a three-layer blend of nylon, polyethylene, and linear low density resins giving them added strength to maintain the flavor, color, freshness and aroma of their contents. In addition, the triple-seal construction of these pouches offer excellent barrier properties for both oxygen and moisture vapor transmission, resulting in extended shelf life for a wide variety of food products (needless to say, these pouches meet FDA requirements for use with food products) as well as excellent protection for non-food items. These bags are boilable.
